

Maintenance and Repair Group

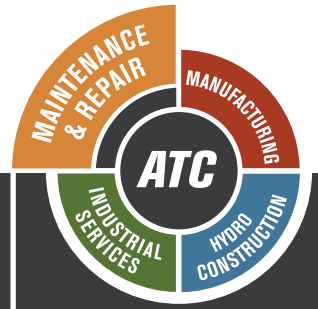

Advance Tank and Construction Company's (ATC) dedicated maintenance and repair group specializes in the maintenance, renovation and repair of above ground storage tanks and other plate structures. From a full bottom replacement to seal repairs, ATC's Maintenance & Repair team is capable of providing solutions to your needs.

ATC brings all of its 40+ years of experience to each one of our customers and utilizes its proprietary QualityConstruct™ process to ensure your project is completed safely and on schedule. ATC has in house professional engineering, drafting, shop fabrication, safety and construction... all with our own people. ATC provides the personalized service of a mid-size company, with all the expertise and resources of a much larger one.

Renovation Capabilities

- Tank Bottom Replacements and Secondary Containment Bottoms and Systems
- Cone Roof, Structure Repair and Replacements

- Tank Jacking and Leveling
- Geodesic Dome Installations

QualityConstruct™

ATC's proprietary three-phase construction process, QualityConstruct, gives you the assurance that your project will be completed quickly, safely, and in compliance with your specifications. This three step process reflects 40 years of construction experience and is updated constantly to help us provide the best service possible.

The difference between QualityConstruct and the "traditional" construction process is less change orders allowing for better scheduling and budget control.

Advance Tank and Construction has been owned and operated by the same family for over 40 years. The company has provided the highest quality fabrication and erection of welded steel tanks since its inception. ATC also has put those years to use by diversifying into tank maintenance and the construction of water and wastewater treatment facilities. Let ATC show you what 40+ years of experience and a real commitment to the customer can do for your project.
